JANUARY 1963
Volume 67 No. 1

ASHEVILLE: 1963

Temperatures: Temperatures averaged below normal over most of the State, with negative departures of 3° to 5° in some central valley and central coastal areas. Only in the northern Sierras and the Siskiyous were average temperatures for the month above normal. At Red Bluff there were 17 consecutive days with minima of 32° or colder, the longest such period in a record that goes back to 1877. Sacramento set a new record low for the 13th and new record lows for the maximum on the 26th, 27th, and 28th. A new record for high minimum was set on the 31st. Fresno reported the mean minimum for the month and the lowest temperature for the month to be the coldest since 1949. New low records for the date were set on the 12th, 13th, and 20th. Record low maximum readings were observed on the 27th and 28th. A reading of 20° at Bakersfield on the 13th was the lowest temperature ever recorded at that station. Santa Maria reported the longest period with minimum readings below 32°, 12 consecutive days. A new low temperature record for the date was set at San Diego on the 13th; the 31° reading was the coldest observed there since 1949. There was considerable damage to citrus and to commercial flower production and truck crops in some areas of Southern California during the month.

Precipitation: The month was essentially rainless until the last 3 days, when substantial amounts set new 3-day records at some stations. Monthly totals were above normal in the central Sierras and portions of the central valley, but elsewhere they were well below normal. Many points reported the longest winter rainless period in the records; specific periods are noted below. Mt. Shasta City went for 42 days without measurable rain; the longest previous period was 23 days. Red Bluff reported 41 days, the longest so late in the winter. Sacramento went for 41 days without rain, but set new 24-hour precipitation records for the dates on the 30th and 31st. There were record high flows on the Upper Yuba River and near record flows on the American River. There were 42 dry days at San Francisco. Eureka reported the second driest January of record. Burbank and San Diego reported the lowest cumulative precipitation of record for the season beginning July 1. At Los Angeles it was the second driest season, and the driest since 1904. At the other extreme, Blue Canyon reported the heaviest 24-hour precipitation ever recorded there in January.

There have been 54 foggy days at Sacramento in the period October through January, to set a new record. Wind at San Francisco Airport reached 60 m. p. h. to equal the record set in 1943.

Storms: There were two reports of funnel clouds observed in southern California on the 9th and one observed on the 10th; none resulted in any damage. Cold weather and strong winds caused extensive damage to citrus, flower crops, and truck crops in southern California from the 12th through the 14th. Wind was strong enough to overturn parked planes and house trailers, sink boats, break windows, and down trees and power lines. Heavy rain and strong wind from January 30 through February 1 in northern California downed utility lines, damaged construction projects, unroofed buildings, and damaged homes. Highways and railroads were closed by flooding; homes and buildings were inundated; and two persons were drowned.

C. Robert Elford
Weather Bureau State Climatologist

ON JAN. 2 TO 8:00 A.M. JAN. 4 (48 HOURS); STATION 2 - FROM 8:00 A.M. ON JAN. 30 TO FEB. 1 (48 HOURS). DATA FROM AIR AND SOIL THERMOGRAPH.

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 84° on the 7th at Santa Monica Pier

Lowest Temperature: -19° on the 12th at Bridgeport

Greatest Total Precipitation: 17.77 inches at Strawberry Valley

Least Total Precipitation: 0.00 inch at 6 stations

Greatest One-Day Precipitation: 11.75 inches on the 31st at Strawberry Valley

Greatest Reported Total Snowfall: 39.5 inches at Twin Lakes

Greatest Reported Depth of Snow on Ground: 31 inches on the 30th at Twin Lakes

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

MAY 1

FEBRUARY 1963
Volume 67 No. 2

ASHEVILLE: 1963

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 99° on the 3d at Perris

Lowest Temperature: 1° on the 17+ at White Mountain 1

Greatest Total Precipitation: 16.35 inches at Honeydew 2 WSW

Least Total Precipitation: 0.07 inch at El Centro 2 SSW

Greatest One-Day Precipitation: 10.54 inches on the 1st at Big Bend RS

Greatest Reported Total Snowfall: 21.0 inches at White Mountain 2

Greatest Reported Depth of Snow on Ground: 29 inches on the 1st at White Mountain 2

SPECIAL WEATHER SUMMARY

TEMPERATURE: Abnormally warm weather was the rule throughout the State during February, with new records being set in almost all areas. Weather Bureau offices in the Sacramento and San Joaquin Valleys and the central and south coasts reported this to be the warmest February in the records, except at San Diego and Fresno, where the month equalled the previous high, and at Los Angeles City Office, where it was the second warmest of record. Many reporting points experienced above normal temperatures on every day of the month. Mt. Shasta City reported this was the first February of record when the minimum did not go below 27°; Red Bluff had the first February with a minimum no lower than 40°; and Burbank set a new record with no minimum lower than 45°. A reading of 92° at Los Angeles Airport was the warmest temperature in the records for February. At Sacramento new records for high minimum readings for the date were set on the 1st, 2d, and 6th.

PRECIPITATION: Monthly totals were below normal at most points, exceeding the normal only in the southern San Joaquin Valley and parts of the south coast. San Diego reports the seasonal precipitation since July 1 is the lowest of record, and Blue Canyon received the least snowfall of any February. At Norden there was no snow on the ground at the end of the month. Normally there is a depth of 93 inches at this time, and in 1961, the previous low record, there was a depth of 13 inches at month's end. Sacramento reports more foggy days this winter than in any previous similar period, and Fresno recorded 14 days in February with dense fog to equal the previous record set in 1947.

STORMS: The heavy rain that fell over northern California on the last 2 days of January continued into the first of February. A Supplemental Precipitation Table for the storm is included in this issue.

Storm conditions from the 9th through the 11th in Los Angeles and Orange Counties has been summarized by the Los Angeles Weather Bureau Office as follows: Forty-eight-hour rainfall amounts ranged from 2.5 inches to 5.0 inches in the Los Angeles metropolitan area from 8 a.m. February 9 through 8 a.m. February 11, 1963. Some areas received periods of heavy downpours which increased storm damage. Inundation, erosion, silting, and mud-slides damaged homes, yards, swimming pools, and autos in the Torrance-El Segundo area, and erosion and mud-slide damage occurred in foothills bordering the San Fernando Valley. Losses are estimated in the vicinity of $250,000.

Beaches, harbors, boats, and coast-side homes were pounded by high surf which preceded and accompanied the rainstorm. These losses may run as high as $750,000. No loss of life was considered directly attributable to the storm.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

MARCH 1963
Volume 67 No. 3

ASHEVILLE: 1963

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 92° on the 27th at Blythe FAA AP and Imperial FAA AP

Lowest Temperature: -12° on on the 3d at White Mountain 2

Greatest Total Precipitation: 18.11 inches at Honeydew 2 WSW

Least Total Precipitation: Trace at Twentynine Palms

Greatest One-Day Precipitation: 5.32 inches on the 27th at Honeydew 2 WSW

Greatest Reported Total Snowfall: 145.5 inches at Twin Lakes

Greatest Reported Depth of Snow on Ground: 72 inches on the 28th at Twin Lakes

SPECIAL WEATHER SUMMARY

Temperature: March temperatures averaged below normal over the entire State, with departures of more than 3° reported in parts of the north. At Red Bluff there were only 3 days during the entire month with average temperatures above normal. Freezing temperatures were reported in some of the fruit growing areas considerably later in the month than the average freeze date for the station.

Precipitation: The first half of the month was generally dry, with several periods of rain during the latter half. Precipitation was above normal over all of the State except the extreme south. In most areas the excesses were only moderate. Santa Maria reported the wettest March in 5 years. Hail was reported in the Sacramento area on several days during the latter part of the month. San Diego reported subnormal precipitation again for the ninth consecutive month. The seasonal total since July 1 is only 2.90 inches at this station, 6.51 inches below nc mal. San Diego also reported sunshine 8 percent abov normal for the month.

Storms: Damage was reported on several dates during the month from wind squalls. Most of these reports ca from the San Joaquin Valley and the south coast. Snow was reported during the month at some low elevation st tions near the central and south coasts in areas where snowfall is seldom observed.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federa Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will b carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included i this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and win movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evapora tion and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and othe causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table in clude snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in th "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observatio times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these sta tions snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate th following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later i "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gag Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Groun Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Tabl for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc.,of substations through 1957 may be found in the publi- cation SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Offic Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Cl matological Data, obtained as indicated above, price 15 cents.

APRIL 1963
Volume 67 No. 4

ASHEVILLE: 1963

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 99° on the 30+ at 3 stations

Lowest Temperature: -15° on the 2d at White Mountain 2

Greatest Total Precipitation: 26.06 inches at Honeydew 2 WSW

Least Total Precipitation: 0.00 inch at 6 Stations

Greatest One-Day Precipitation: 6.90 inches on the 12th at Upper Mattole

Greatest Reported Total Snowfall: 169.5 inches at Twin Lakes

Greatest Reported Depth of Snow on Ground: 108 inches on the 20th at Twin Lakes

SPECIAL WEATHER SUMMARY

Temperature: The month averaged well below normal over the entire State, with new cold records set in some areas. Negative departures of average temperature were 2° to 3° at most points along the coast and 6° to 10° at inland locations.

Mt. Shasta City reported the coldest April in 34 years and the third coldest in the records. Red Bluff had the coldest April since 1896, and March and April combined were the coldest for those months in the records. There was only 1 day in April and only 4 days in March and April with average temperature above normal. Blue Canyon reported the lowest mean temperature in records going back to 1905. At Sacramento the mean temperature was the third lowest of record, and the average maximum temperature was the lowest of record. Fresno's mean maximum was the second lowest in the records. Santa Maria reported the coldest April since 1955. Burbank had the second coldest month of record and the coolest since 1933. The average maximum was the lowest of record. San Diego's temperature was the lowest since 1945.

Precipitation: Most of the State, from Los Angeles northward, received greater than normal precipitation in April, but San Diego and Bishop reported less than normal. Rainfall in the far north was very heavy, while in the central part of the State amounts were not excessively heavy, but rainfall was quite persistent. Abnormally dry conditions continue in the far south.

Mt. Shasta reported the third wettest April of record. Eureka had the second wettest; the monthly total was exceeded only in 1896. There were 32 consecutive days, from March 21 through April 21, with a trace or more precipitation. Snowfall in the mountains was much above normal. Norden had 49 inches of snow on the ground at the end of the month, 11 inches above the long-term average for that date. Sixteen days of rain at San Francisco set a new record for April. Twelve days at Fresno also set a new record, and the monthly total precipitation was the third highest of record and the greatest since 1926. At the other extreme, San Diego reports the seasonal total since July 1, is the third lowest of record.

Storms: Strong winds over much of the State on the 1st were particularly damaging along the coast. Three persons were killed and several injured. Property damage was substantial. Hailstorms were widespread in the Tehama and Butte County areas on the 10th. Some stones up to 1 1/2 inches in diameter were reported, and considerable damage resulted to young fruit and nut crops.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT THE TIME OF OBSERVATION.

(A) PAN PAINTED INSIDE AND OUTSIDE WITH ALUMINUM PAINT.
(B) PAN PAINTED INSIDE WITH ALUMINUM PAINT.
(C) PAN IS OF COPPER, AND PAINTED INSIDE AND OUTSIDE WITH ALUMINUM PAINT.
(D) PAN IS OF STAINLESS STEEL.
(E) PAN PAINTED OUTSIDE WITH ALUMINUM PAINT.
(F) PAN PAINTED OUTSIDE WITH GRAY ENAMEL.
(G) PAN IS OF STEEL PLATE, PAINTED WITH ALUMINUM INSIDE AND OUTSIDE.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

JUNE 1963
Volume 67 No. 6

ASHEVILLE: 1963

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 116°on the 18th at Death Valley

Lowest Temperature: 11° on the 4th at White Mountain 2

Greatest Total Precipitation: 6.93 inches at Meyers 4 SW

Least Total Precipitation: 0.00 inch at 95 stations

Greatest One-Day Precipitation: 4.50 inches on the 17th at Meyers 4 SW

Greatest Reported Total Snowfall: 46.5 inches at White Mountain 2

Greatest Reported Depth of Snow on Ground: 46 inches on the 7th at White Mountain 2

SPECIAL WEATHER SUMMARY

Temperature: June temperatures averaged below normal over most of the State, with negative departures of more than 2° in most mountain areas and in some parts of the south. Red Bluff reported a minimum of 50° on the 29th, the lowest ever reported on that date. Stockton reported the lowest maximum readings on the 27th and 28th ever reported on those dates. At the other extreme was 102° on the 16th to set a new record for the date and 103° on the 17th to equal the record for that date. The minimum on the 17th, 69°, was the highest ever recorded on that date and equalled the highest minimum ever recorded in June. At the Red Bluff station February was more than 6° above normal, but the other 5 months in the first half of 1963 have all been cooler than normal, with the departures for the six-month period averaging -1.7°.

Precipitation: Rainfall was lighter than normal over the north and central coasts and in most of the interior valley. Greater than normal precipitation was reported from mountain areas and over the southern part of the State. Both Los Angeles and San Diego reported the heaviest June precipitation since 1934. Los Angeles experienced considerably more cloudiness than usual, while Santa Maria reported more wind but less fog than usual.

Storms: Wind and heavy rain on the 10th in the San Francisco Bay Region and over the northern San Joaquin Valley disrupted power, caused local flooding, and resulted in several traffic accidents. A private plane groundlooped while landing in the wind at Stockton. The rain and wind moved into the southwestern part of the San Joaquin Valley on the morning of the 11th, causing some flooding and minor damage to buildings. Damage to streets and vehicles resulted in San Diego on the 11th as a result of rains and local flooding.

Two boys who had been fishing sought shelter under a pine tree and were killed by lightning on the 13th at Lyon Dam, east of Sonora. Lightning on the 16th in Tehama County burned considerable range and wheat land, a few farm buildings, and some utility poles. Hail on the 18th in the vicinity of Mt. Shasta City resulted in limited damage to crops and some local flooding. Strong winds swept over the Coachella Valley on the 21st and 22d, sandblasting cars and trucks and overturning several house trailers.

CORRECTIONS

June 1962	Station Index	Beaumont 1 E	Beginning June 15, 1962 Longitude should be 116 58' and Elevation should be 2685 feet
July 1962	Climatological Data Table	Sacramento WB AP	Precipitation departure should be 0.00.
July 1962	Climatological Data Table	Sacramento WB City	Precipitation departure should be 0.00
September 1962 thru December 1962	Station Index	Secret Valley	Secret Valley established 9-26-62. Data for Sept., Oct., Nov., and Dec. 1962 published under 04-8075-3 Secret Valley Maintainance Station. Time changed from 5 00 p.m. to 6 00 a.m.
Oct thru 1962 thru December 1962	Station Index	Secret Valley Maintainance Station	Values for this station for October thru December 1962 apply to Secret Valley 04-8074-3. Secret Valley Maintainance Station closed 9-26-62
October 1962	Daily Precipitation Table	Bucks Creek PH	Precipitation for 12th should be 10.70 inches. Total Precipitation should be missing.
October 1962	Climatological Data Table	Camp 1	Average Min should be 39.8°. Average should be 60 3°.
October 1962	Daily Temperature Table	Camp 1	Minimum Temperature on October 1 should be 47° and Average Minimum 39 8°.
October 1962	Climatological Data Table	San Francisco WB AP	Precipitation departure for October should be 6.56.
December 1962	Daily Precipitation Table	Gaberville	Precipitation values on 29th should be 0.00, 30th 0.10 and 31st 0.65
December 1962	Climatological Data Table	Winters	Precipitation total 2.43 inches. Greatest day 1.12 inches on 17th. Number of days 0.10 or more 4; 0.50 or more 2; 1.00 or more 1. Sacramento Drainage Precipitation Division Average 4.51, departure - 1.92.
December 1962	Daily Precipitation Table	Winter	Precipitation measurement for December 17, 1.12 inches. Total 2.43
January 1963	Climatological Data Table	Nicolaus #2	Precipitation Departure for January should be 0 49
February 1963	Climatological Data Table	Nicolaus #2	Precipitation Departure for February should be - 0.96.
February 1963	Daily Precipitation Table	Vincent Fire Patrol	Precipitation values on 13th should be 0 03, 14th 0 11
March 19 thru April 30, 1963	Daily Precipitation Table	Bradford Ranch	Delete all record for Bradford Ranch from March 19th thru April 30, 1963. Not official.
March 1963	Climatological Data Table	Idria	Delete Average Max and Average, also highest and date and Degree Day total.
March 1963	Daily Temperature Table	Idria	Delete all Max Temperatures.
March 1963	Climatological Data Table	Knights Ferry 2 SE	Total Precipitation 2.88 inches.
March 1963	Daily Precipitation Table	Knights Ferry 2 SE	Precipitation value on 31st 0.
March 1963	Evaporation and Wind Table	Knights Ferry 2 SE	Evaporation on 31st 0.15; Total Evaporation 2.73 inches.
March 1963	Climatological Data Table	Nicolaus # 2	Precipitation Departure for March 0.98
March 1963	Climatological Data Table	Santa Paula	Total 2.99 inches. Number of days with 0.10 or more, 3, 0.50 or more,2; 1.00 or more,2. South Coast Drainage Divisional Average 2.37; Departure - 0.26.
March 1963	Daily Precipitation Table	Santa Paula	Precipitation on 28th 1.02 inches.
April 1963	Climatological Data Table	Alderpoint	Average Minimum 40 9°, Average 51 1° Lowest 33° on 2d, Degree days 199, Number of days with Minimum 32° or below,0.
April 1963	Daily Temperature Table	Alderpoint	Minimum on 1st, 35°. Average Minimum 40.9°.
April 1963	Climatological Data Table	Nicolaus # 2	Precipitation Departure for April 2.76 inches.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

NOTE: COUNT OF DAYS WITH SNOWFALL OF 1 INCH OR MORE ON GROUND WAS BEGUN WITH DATA FOR JANUARY 1963.
E AMOUNT IS WHOLLY OR PARTIALLY ESTIMATED.

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 120° on the 16+ at Death Valley

Lowest Temperature: 26° on the 25th at Boca, and on the 3d at White Mountain 1

Greatest Total Precipitation: 1.15 inches at Little Valley

Least Total Precipitation: 0.00 inch at 546 stations

Greatest One-Day Precipitation: 1.15 inches on the 14th at Little Valley

Greatest Reported Depth of Snow on Ground: 15 inches on the 1st at White Mountain 2

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace , an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the 1961 annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

ASHEVILLE: 1963

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 119° on the 15+ at Death Valley

Lowest Temperature: 22° on the 31st at White Mountain 2

Greatest Total Precipitation: 2.60 inches at Henshaw Dam

Least Total Precipitation: 0.00 inch at 172 stations

Greatest One-Day Precipitation: 2.40 inches on the 9th at Henshaw Dam

Greatest Reported Total Snowfall: 3.0 inches at White Mountain 1 and White Mountain 2

Greatest Reported Depth of Snow on Ground: 3 inches on the 31st at White Mountain 1 and at White Mountain 2

SPECIAL WEATHER SUMMARY

Temperature: Along the coast temperatures were above normal during the month, with positive departures up to +2.8° in the south. Over the interior valleys temperatures were slightly below normal, while negative departures in the Sierras were as great as -2.9°. This was the sixth consecutive month at Red Bluff with below normal temperatures, and the maximum of 74° on the 23d was the lowest ever recorded on that date. Sacramento observed a minimum of 67° on the 8th, the highest observed on that date, while their 74° maximum on the 23d was the lowest for that date. Burbank reported that the summer as a whole was the coolest since 1944.

Precipitation: With but few exceptions, all parts of the State received less than the normal amount of precipitation. Of the first order stations, only Bishop and Mount Shasta City reported greater than normal totals for August. Sunshine along the south coast was greater than normal. Los Angeles airport reported the second highest number of clear days for August in the records, and Santa Maria reported 24 clear days, against a normal of only 14.

Storms: On the 7th and 8th, heavy rains occurred in the western part of the Mojave Desert area, particularly on the north and east slopes of the San Jacinto, San Bernardino, and Tehachapi Mountains. Highways were washed out in several places; homes were flooded; and utilities were disrupted.

A parallel situation developed on the 15th on the slopes of Wilshire Peak about 15 miles east of Redlands. Mud and rocks washed down from the mountainside covered orchards and farmland. Wind on the 14th east of El Centro broke off several power poles, and rain on the 17th in the vicinity of Blythe caused some flooding, damaged agricultural crops, and blocked highways.
